Instructions for Black and White Coloring Poster:

- 1) Print 4-piece black and white poster background on heavy paper. Trim edges on dotted lines and tape together.
- 2) Color!
- 3) Also color the small 8.5 x 11" coloring poster included in the bundle.

Ocean Life Zones

The oceans cover 75% of the earth. They can be divided into the **coastal zone** - shallow, warmer waters along the coasts, full of nutrient-rich materials and the **open sea** - the rest of the ocean away from land.

Ocean

The oceans cover 75% of the earth. They can be divided into the **coastal zone** - shallow, warmer waters along the coasts, full of nutrient-rich materials and the **open sea** - the rest of the ocean away from land.

Life Zones

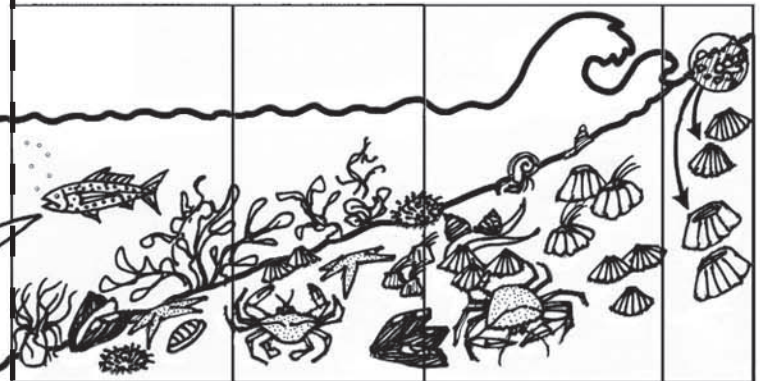

Open Sea

Microscopic **phytoplankton** and **zooplankton** make up the bottom of the ocean's food web.

Coastal Zone

Intertidal Zones have changing water levels with the tides.

Intertidal Zones

Low Tide Zone:
mostly underwater.

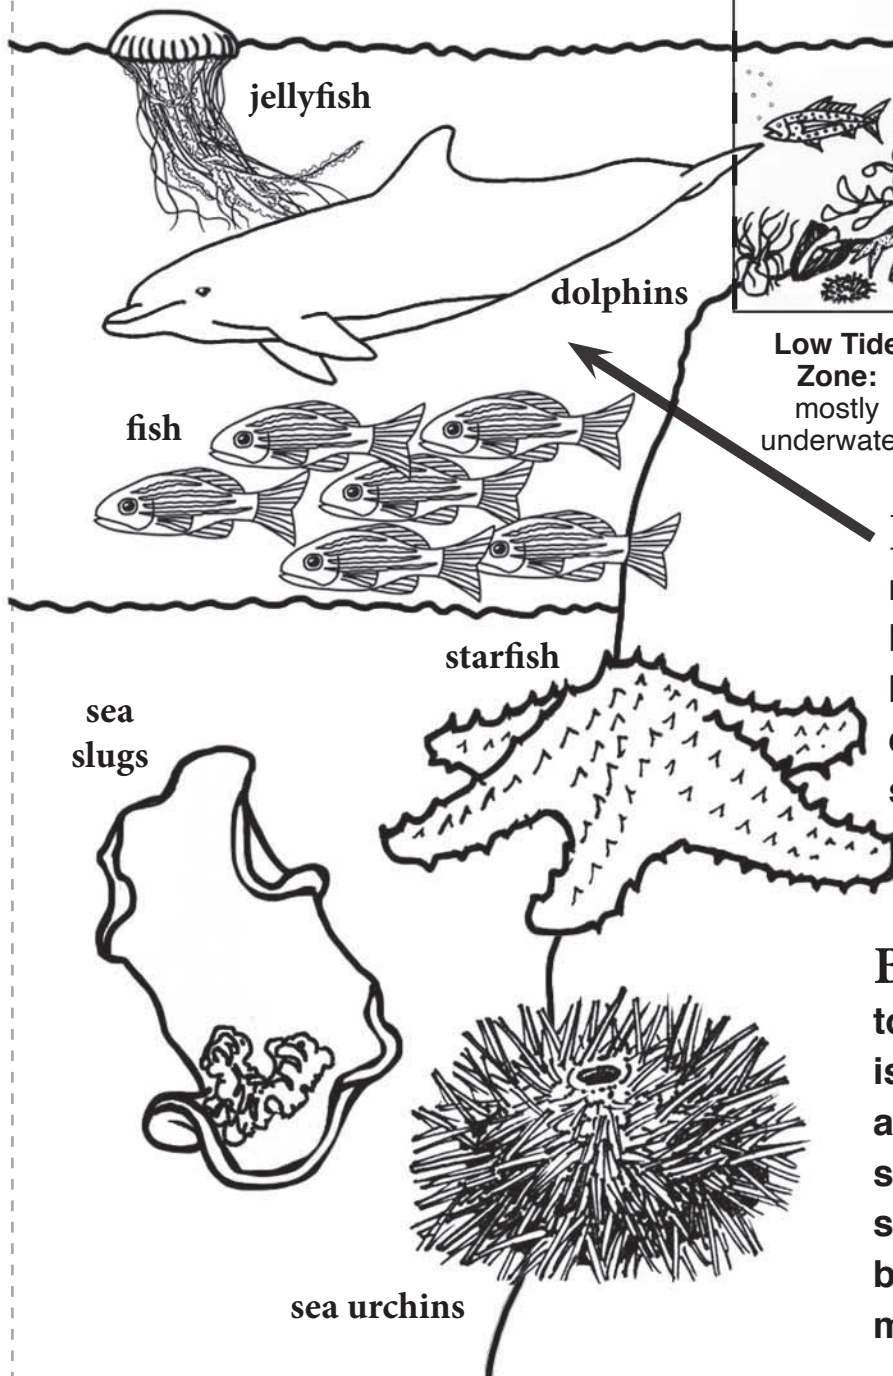

Middle Tide Zone:
underwater half the time.

High Tide Zone:
underwater in high tide.

Splash Zone:
only spray.

Photic Zone: sunlight reaches 650 feet (200m). Most life is on the surface: plankton, krill, coral reefs, fish, whales, dolphins, sea turtles and sharks.

Bathyal Zone: reaches down to 3,300 feet (1000m). There is very little light, but many animals live here, including some fish, octopi, squid, urchins, starfish, sea slugs, sponges and bioluminescent animals that make their own light.

Abyssal Zone

sperm whale

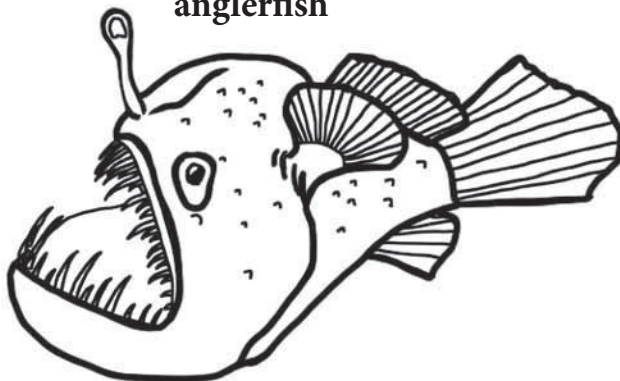

hatchet fish

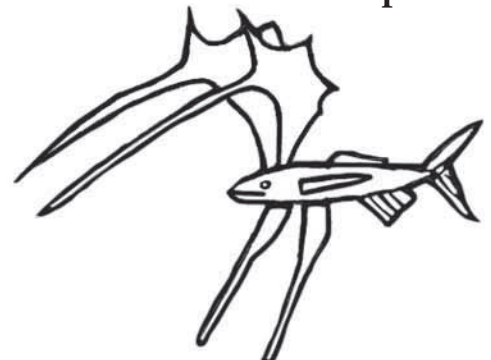

Abyssal Zone: reaches the ocean floor at 13,000 feet (4,000m) or deeper – with pressure that increases as you descend. Only some animals, like the sperm whale and giant squid can survive the great pressure. By the time you reach the ocean floor, only strange creatures, such as: anglerfish, tripod fish, worms and sea stars remain to feed on the falling debris and nutrients.
